
HIGHLIGHTS

- The Glenmede Quantitative U.S. Long/Short Equity strategy, which targets a net equity exposure of 30%, outperformed its blended benchmark (30% Russell 3000 Index, 70% Barclays 30-month Treasury Bill) during the quarter.
 - For the quarter, the strategy had mixed contributions from multi-factor stock selection models, including biases towards stocks with relatively lower valuations (favorable) and attractive fundamentals (unfavorable).
 - The long equity positions in the strategy reflected stock selection outperformance in eight of eleven sectors. The most positive relative contributions were in the Materials and Communication Services sectors. The most negative relative contributions were in the Industrials and Consumer Discretionary sectors.
-

The Glenmede Quantitative U.S. Long/Short Equity Composite had a total return for the First Quarter 2022 of +0.7% (+0.4% net). The Quantitative U.S. Long/Short Equity Composite outperformed a blended mix of 30% Russell 3000 and 70% Barclays 3-Month Treasury Bill Indexes by +2.2% (+1.9% net). This strategy is managed with a net equity exposure of about 30%.

For the First Quarter 2022, the S&P 500 and Russell 3000 Indexes had total returns of -4.6% and -5.3%, respectively. Investor sentiment was negatively impacted by the Omicron wave, surging inflation and the Russian invasion of Ukraine. On March 16, the federal funds target rate was raised for the first time since December 2018 and the Fed is expected to raise short-term interest rates at least six more times in 2022 to combat inflation. The 10-year Treasury yield increased to about 2.3% from about 1.5% at the end of 2021. The Russell 3000 Value Index (-0.8%) outperformed the Russell 3000 Growth Index (-9.3%) by about +8.4%. The best performing sectors in the Russell 3000 Index were Energy (+39.0%) and Utilities (+4.3%). The worst performing sectors were Communication Services (-12.1%) and Consumer Discretionary (-10.2%).

For the quarter, the strategy had mixed contributions from multi-factor stock selection models, including biases towards stocks with relatively lower valuations (favorable) and attractive fundamentals (unfavorable). The strategy benefitted from underweightings to companies with negative earnings. The strategy was negatively impacted from underexposures to four of the five largest companies in the Russell 3000 Index. The average stock in the Index underperformed with a total return of -8.4% (equal-weighted). The long equity positions in the strategy reflected stock selection outperformance in eight of eleven sectors. The most positive relative contributions were in the Materials and Communication Services sectors. The most negative relative contributions were in the Industrials and Consumer Discretionary sectors. Industry group biases had net positive impact on performance from overweightings in Energy, and underweightings in Consumer Discretionary and Information Technology stocks. The strategy had a positive spread between the long versus short positions. Long equity positions reflected a total return of -3.3% and short positions had a total return of -5.9%.

The latest U.S. real GDP estimate for Fourth Quarter 2021 was +6.9% versus +2.3% for Third Quarter. GDP reflected gains in gross private domestic investment (+36.7%), exports (+22.4%) and personal consumption expenditures (+2.5%). Detractors included imports (+17.9%), federal spending (-4.3%) and state/local spending (-1.6%). Many economists project real GDP growth of 3% to 4% for 2022. Looking forward, as nations continue to manage through the pandemic, we would expect strong corporate earnings growth for 2022. However, the tense situation between Russia and Ukraine is having significant global economic and financial impacts. Currently, our leading industry group indicators target overweightings in Communication Services, Information Technology, and Real Estate, and underweightings in Health Care and Industrials. We believe this strategy is well positioned with its multifactor approach favoring stocks with cheaper valuations, stronger fundamentals, positive earnings/revenue estimate trends and attractive technicals.

QUANTITATIVE U.S. LONG/SHORT EQUITY Composite Performance (%)

As of 3/31/2022	QTD	YTD	1 YEAR	3 YEAR*	5 YEAR*	10 YEAR*	SINCE INCEPTION* (11/30/06)
Glenmede (Gross)	0.7	0.7	11.8	5.5	3.9	5.3	3.8

Glenmede Investment Management, LP claims compliance with the Global Investment Performance Standards (GIPS®).

Glenmede Investment Management, LP, a registered Investment Advisor, is an affiliate of The Glenmede Trust Company, NA (GTC). The "Firm" is defined as all investment advisory accounts managed by Glenmede Investment Management LP. Effective January 1, 2007, the Investment Product Management Group of GTC became Glenmede Investment Management, LP. All performance prior to January 1, 2007, shown here as the performance of GIM, was previously reported as the performance of the Investment Product Management Group of the Glenmede Trust Company.

Past performance is not indicative of future performance and may be lower or higher than the performance quoted. All of the composites' valuations and returns are computed and stated in U.S. Dollars. Additional information regarding the Firm's policies for valuing portfolios, calculating performance and preparing compliant presentations, is available upon request. A GIPS® compliant presentation, as well as a complete list of firm composites and performance, can be requested from Jeffrey Coron at 215.419.6627. Please see the GIPS® presentation for further explanation.

The Glenmede Quantitative U.S. Long/Short Equity Composite objective is to use long and short equity positions based on proprietary multi-factor stock ranking models, overlaid with upside and downside risk screens, to achieve long-term capital appreciation consistent with reasonable risk to principal. The Russell 3000 Index is an unmanaged, market value weighted index, which measures total return performance of the 3,000 companies that are largest in the market. One cannot invest directly in an index.
