What is Energy Resilience?

Energy resilience refers to the ability of the energy system to deliver reliable, consistent power amid structural change and external disruption. The Energy Transition represents a fundamental shift in how energy is produced and consumed—moving toward systems that are more diversified, more resilient, and better suited to an increasingly electrified future. The Glenmede Energy Resilience strategy is built around this great transition—and the need for energy resilience in particular. We believe strengthening the U.S. energy system to ensure reliable, consistent energy delivery will be essential in the years ahead.

Our proprietary framework on the Energy Transition supply chain:

DIRECT DRIVERS

Companies developing, producing, or facilitating the delivery of energy technologies

Materials Companies

Supply critical inputs, such as lithium, copper, rare earth minerals, for energy technologies

Industrial Companies

Designs and builds critical infrastructure and equipment across energy landscape

Energy Companies

Develop and integrate fuels and alternative energy technologies

Utility Companies

Modernize grids and provides power delivery

Real Estate Companies

Implements energy-efficient technologies in our built environment

INDIRECT CONTRIBUTORS

Companies benefiting from or enabling the broader electrification and digital transformation

Financial Companies

Allocate capital to major energy infrastructure projects as well as alternative renewable energy development

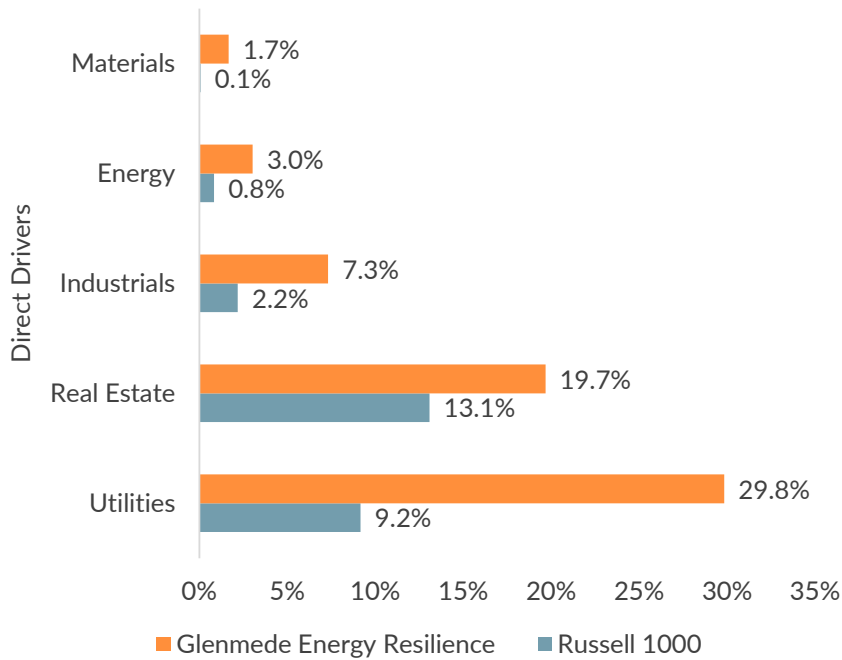

Technology + Companies

Purchase large-scale energy infrastructure and develop the digital tools for energy optimization

All figures based on monthly data as of 3/31/2026, unless otherwise noted.

Climate Change-related Revenue

Climate Change-related Revenue aggregates all revenues derived from business activities such as from renewable and alternative energy, energy efficiency technologies, green building and materials, low-carbon transportation, energy storage, smart grids, and other solutions that contribute to climate change mitigation or adaptation.

The strategy managed to **deliver 3.5x higher renewable energy CAPEX** exposure than the benchmark, 33% vs. 9%

Energy-efficiency revenue exposure is over **2x** higher in the strategy vs. the benchmark.

Energy Derived from Renewable Sources

Past performance is not indicative of future performance and may be lower or higher than the performance quoted. Characteristics, holdings and sector weights are based on a representative account, are as of 3/31/2026 and are subject to change and may no longer be held in client portfolios. The holdings of any particular account may vary based on investment restrictions applicable to the account. It should not be assumed that the investment in any presented were or will be profitable.

Glenmede Investment Management, LP claims compliance with the Global Investment Performance Standards (GIPS®).

GIPS® is a registered trademark of CFA Institute. CFA Institute does not endorse or promote this organization, nor does it warrant the accuracy or quality of the content contained herein.

Glenmede Investment Management, LP, a registered Investment Advisor, is an affiliate of the Glenmede Trust Company, NA (GTC). The "Firm" is defined as all investment advisory accounts managed by Glenmede Investment Management LP. Effective January 1, 2007, the Investment Product Management Group of GTC became Glenmede Investment Management, LP. All performance prior to January 1, 2007, shown here as the performance of GIM, was previously reported as the performance of the Investment Product Management Group of the Glenmede Trust Company.

All of the composites' valuations and returns are computed and stated in U.S. Dollars. Net numbers are net of max allowable management fee for this strategy. Additional information regarding the Company's policies for valuing portfolios, calculating performance and preparing compliant presentations, is available upon request. A GIPS® compliant presentation, as well as a complete list of firm composites and performance, can be requested from GIM Client Service at gimclientservices@glenmede.com. Please see the GIPS® presentation for further explanation.

The Energy Resilience Composite objective is to provide maximum long-term return with reasonable risk to principle, by investing in domestic stocks of the Russell 1000 and Standard & Poor's 500 universes and in large cap ADRs. The strategy is managed to exclude companies that don't meet minimum revenue, financing, or consumption based thresholds associated with green solutions.

The Russell 1000 Index is an unmanaged, market value weighted index, which measures performance of the largest 1,000 companies in the market. One cannot invest directly in an index.
