

## Investment Overview

Disciplined investment process that seeks to invest in international companies that have an attractive combination of valuation, fundamental, earnings and market technical characteristics.

## Investment Philosophy

We abide by a disciplined approach anchored in comprehensive assessments of valuation, fundamental, and market technical factors.

We believe these characteristics are determining factors that drive above market returns over time. In our view, these "ideal" stock characteristics should be intuitive considerations for all investors.

Focusing on these attributes, rather than chasing short term price movements in the stock market, our process strives to produce differentiated sources of return over the long term.

**Mutual fund investing involves risks; principal loss is possible. The risks associated with foreign investments are heightened when investing in emerging markets. The Fund invests in foreign securities which involve greater volatility and political, economic and currency risks and differences in accounting methods. Diversification does not assure a profit or protect against loss in a declining market.**

**Excess Return:** amount that returns exceed relative benchmark return. **Alpha:** a measure of an investment's ability to generate returns above a benchmark, reflecting the value added by active management. **Weighted Average Market Cap:** total value of all outstanding shares weighted to reflect the portfolio's positions. **Price to Earnings (P/E):** ratio of stock price to earnings. **Price to Book (P/B):** ratio of stock price to per share shareholders' equity. **Return on Equity (ROE):** net income divided by equity. **5-Year EPS Growth:** annualized historical earnings per share growth over the last 5 years. EPS Growth is not a forecast of the fund's future performance. **Active Share:** measures the percentage of stock holdings in a manager's portfolio that differs from the benchmark index. **Sharpe Ratio:** sharpe ratio is a simple measurement of the risk-adjusted performance. **Tracking Error:** measures the active risk of the portfolio and the annualized standard deviation of the excess returns between the portfolio and its benchmark. **Standard Deviation:** measures dispersion of a set of data from its mean. **Beta:** systematic risk of a portfolio; represents sensitivity to the benchmark. The MSCI World ex US Index is a free float-adjusted market capitalization index that is designed to measure the equity market performance of developed markets, excluding the US. The MSCI World ex US Index consists of the following 22 developed market country indices: Australia, Austria, Belgium, Canada, Denmark, Finland, France, Germany, Hong Kong, Ireland, Israel, Italy, Japan, the Netherlands, New Zealand, Norway, Portugal, Singapore, Spain, Sweden, Switzerland, and the UK. **One cannot invest directly in an index.** The Morningstar Rating™ for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history, without adjustment for sales loads. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating™ for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating™ metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. These extended performance ratings are based on the historical adjusted returns prior to the inception date of the Institutional Class shares (Institutional Class inception was 5/5/2025) and reflect the historical performance of the oldest share class (inception date for Advisor Class shares was 11/17/1988), adjusted to reflect the fees and expenses of the Institutional Class shares. © 2025 Morningstar, Inc.
