¹Annualized returns. Inception date: 9/28/2012.

²The Global Secured Options Portfolio Institutional Shares commenced operation on May 5, 2025; therefore, performance listed for the Institutional Shares prior to the inception date (09/28/12 through 05/05/25) is based on the average total return for the Advisor Shares. Performance listed for the period of 5/5/2025 through 9/30/2025 is the average annual total return for the Institutional Shares.

Performance data quoted represents past performance; past performance does not guarantee future results. The investment return and principal value of an investment will change so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance of the fund may be lower or higher than the performance quoted. Performance data current to the most recent month end may be obtained by calling 1.800.442.8299. Performance would have been lower without expense limitations in effect.

Returns Based Statistics²

	NOVLX	MSCI ACWI
Standard Deviation %	10.39	13.67
Beta	0.70	1.00
Sharpe Ratio	0.45	0.67
Upside Capture Ratio %	63	100
Downside Capture Ratio %	72	100

Based on monthly data as of 9/30/2025. Standard deviation are annualized.

Historical Returns/Risk² (9/28/2012 - 9/30/2025)

All figures based on monthly data as of 9/30/2025, unless otherwise noted.

Important Considerations

- Covered call writers forgo participation in any increase in stock prices above call exercise prices, and continue to bear the downside risk of stock ownership if stock prices decrease more than the premium income received from writing options.
- A secured put strategy has a risk/return profile similar to a covered call strategy on the same index. Market prices will influence choice of strategy.
(Source: Options Clearing Corp.)
- Writers of put options bear the risk of loss if the value of underlying stocks decline below the exercise price, and resulting losses could be substantial if stock price declines are significant.

All figures based on monthly data as of 9/30/2025, unless otherwise noted. All returns are calculated in U.S. dollars. Total returns comprise price appreciation/depreciation and income as a percentage of the original investment.

Investors should consider the investment objectives, risks, charges and expenses carefully before investing. Read the prospectus or summary prospectus carefully before investing.

Mutual fund investing involves risk. Principal loss is possible. The Fund invests in options which have risks of unlimited losses of the underlying holdings due to unanticipated market movements and failure to correctly predict the direction of the securities prices, interest rates and currency exchange rates. This investment may not be suitable for all investors. Investing in Non-U.S. securities may entail risk due to foreign economic and political developments, and may be subject to currency risks and differences in accounting methods. These risks are greater in emerging markets. ETFs are subject to additional risks that do not apply to conventional mutual funds, including the risks that the market price of an ETF's shares may trade at a discount to its net asset value, an active secondary trading market may not develop or be maintained, or trading may be halted by the exchange in which they trade, which may impact a Fund's ability to sell its shares. Diversification does not assure a profit or protect against loss in a declining market.

Beta: systematic risk of a portfolio; represents sensitivity to the benchmark. **Strike Price:** price at which one would have the right to buy or sell the stock. **Expiration Date:** date the options contract expires. **Standard Deviation:** measures dispersion of a set of data from its mean. **Sharpe Ratio:** a measure of reward per unit of risk; excess return over the risk-free rate divided by the standard deviation. **Upside Capture:** Relative return to the S&P 500 Index for periods with positive market returns since inception. **Downside Capture:** Relative return to the S&P 500 Index for periods with negative market returns since inception. The value of an option position will reflect, among other things, the current market value of the underlying investment, the time remaining until expiration, the relationship of the exercise price to the market price of the underlying investment and general market conditions. Options that expire unexercised have no value. By buying a call option on a security, the Fund has the right, in return for the premium paid, to buy the security underlying the option at the exercise price. By writing (selling) a call option and receiving a premium, the Fund becomes obligated during the term of the option to deliver securities underlying the option at the exercise price if the option is exercised. By buying a put option, the Fund has the right, in return for the premium, to sell the security underlying the option at the exercise price. By writing a put option the fund becomes obligated during the term of the option to purchase the securities underlying the option at the exercise price. The MSCI All Country World captures large and mid-cap representation across 23 Developed Markets (DM) and 23 Emerging Markets (EM) countries. With 2,480 constituents, the index covers approximately 85% of the global investable equity opportunity set. **One cannot invest directly in an index. The Fund is distributed by Quasar Distributors, LLC.**
